

Beginner Guide

Best teams, relic requirements, floor breakpoints, and investment priorities early and higher endgame floors

Normal Summons & Wishlist

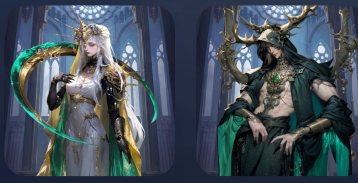

Summoning Tips:

- The wishlist unlocks after 30 regular summons.
- Once you've finished ascending one of the left side deities, swap them for one on the right.
- Pity System: Guaranteed deity every 50 summons.
- Overall it's not recommended to spend Elysian Gems on regular summons - unless for the first 1-2 days in order to get some units into your roster. **Otherwise this could hinder your story progression!**

One-Copy Wonders:

- One-Copy Wonders are deities that can fulfill their role at Elite for the Early Game.
- It's a good idea to get a copy of these heroes early (most are supports).
- Note: There are more One-Copy Wonders and in the beginning it's all about if you need copies for raising the hero level or not - e.g. even Heracles works with one copy to deal good damage

Shop Priority

Unlocks from Story Progression

Keep pushing to unlock stages or events within the game that let you get a better and stronger account.

PROLOGUE 4 (STAGE 1-1)	Godcall Grove
STAGE 1-6	AFK Mode & Sanctum
STAGE 2-1	Delusions Den
STAGE 2-12	Auto Attack, Celestial Spire
STAGE 3-9	Mindsea (Guild)
STAGE 3-18	Shrine (Undying Flame)
STAGE 4-8	Grand Arena (PVP)
STAGE 5-1	Destined Constellation (make a Zodiac Hero to a Destined - can upgrade past Level 140)
STAGE 5-4	Resonating Altar (You level up 5 heroes, the rest will be the level of the lowest of the 5)
STAGE 5-18	Bounty Pool
STAGE 6-3	Forgotten Labyrinth
STAGE 7-3	Beacon of Honor
STAGE 8-3	Beacon tree
STAGE 19-3	Totems

Ascension Tips

- Try to avoid using regular ascended-grade deities as fodder. Only use Zodiac deities.
- Focus on building one hero per faction at a time to avoid spreading your fodder too thin.
- You can start building a deity once you have 2 Elite+ copies (Zodiacs) as that's enough to reach Mythic.
- Note: Some deities don't perform well until they reach Divine, so it's recommended to wait for four copies to ascend them right away.
- Check official tier lists later for further recommendations.
- Once a deity reaches Mythic, they no longer require fodder (only the deity itself).
- Zodiac deities will cap (max) at Legendary+.
- Only ascend Zodiac to Legendary if you have 2 extra copies to ascend to Legendary+ (to have fodder).

Faction Summons

- In the early phase your main carry and good supports are your primary targets. Therefore spend your feathers on the heroes you're missing or that you need to level up for progression. Carry > Support > Tank.
- The Wishlist also applies to Faction summons.
- It's recommended to save those for the upcoming banner event - happens every 2 weeks.

Chronos Chamber

- Unlocks after a total of 750 summons
- Within the Chronos Chamber you can summon Starglint Deities by using Star Tracer currency.
- You can specify what Deity you want to summon here. I would suggest going for Nyx first - after that go for Zeus all the way. He is the best DMG dealing hero for all modes (but needs Divine and Relic Level 30 to be upgraded).
- Pity System:** You will get the Starglint deity every 40 summons guaranteed.
 - After doing 30 summons you could do single pulls to save resources until getting the Deity.

What should I do first?

- Focus on pushing Odyssey, Torment Rift and build your first team. Summon hard to get a good roster (1/2 DamageDealer, 2 Support, 1/2 Tanks)

DO NOW - Push Odyssey - Build 1 team - Gear 2 DPS	DO SOON - Weekly Torment Rift - Carry relic breakpoints - Wish List cleanup	IGNORE FOR NOW - Deep PVP pushes - Second team - Luxury shop buys
✓ Finish Tutorial	✓ Push Odyssey until stuck	
✓ Claim all mail and login rewards	✓ Set your Wish List (Summon 30x to unlock)	
✓ Buy the daily 30% off regular summons	✓ Spend early gems on roster building	
✓ Finish daily missions	✓ Check official discord for code & stuff	

What makes my account stronger?

- Odyssey → Shrine**
Best early account scaling. Push this first. If you're stuck - check shrine for better relics and keep an eye for your odyssey progress cause beating boss stages gives you Undying Flames to level up your shrine.
- Torment Rift → Beacon Tree**
Second permanent scaling system. Do not skip weekly progress here. Also if stuck, check if you can allocate points here to get better account bonus stats.
- Main carry relic & gear**
Most stage walls are investment walls, not roster walls. Upgrade your gear for damage heroes. Also your top two damage dealers should have the best gear.

Relic Breakpoints

Don't judge over these Dieties too early - they might not seem strong at the start but gain value through their relic level.

Hecate

Starts feeling a bit like a carry when you can get his relic to level 10.

Poseidon

Strong impact at Relic 10. Too weak below that for most teams.

Phoenix

Higher relic levels matter because that is where her Rift value really turns on.

Also these items will be very important later in the game - start collection the Genesis Elixir first, to unlock relics and/or bring some of them to Level 10. But it's not a priority in the beginning since you need your deity to be at Exalted(+) or higher to unlock relics.

Genesis Elixir (used to level relic from 1-10)

Apotheosis Elixir (used to level relic from 10-30)

Eternity Elixir (used to level relic from 30+)

Use this when you get (or feel) stuck

- Check your Shrine**
If Odyssey progress upgrades Shrine, go push Odyssey first. (Some stages will give you "Undying Flame" as reward to level up your shrine - push there.)
- Check Beacon Tree**
Weekly Torment Rift progress gives account-wide stats that never get wasted.
- Check carry relic**
Some heroes are weak before their breakpoint. Do not judge them too early.
- Check gear placement**
Your top two damage dealers should have priority gear. Do not spread it around.
- Check Resonating Altar**
You level five heroes to share their level with every hero placed on the Altar. If your Altar slots are empty (you are missing account-wide level boosts cause not placed heroes will stay at level 1. Later you will level your heroes here - so keep an eye on whether you can get a level up to get stronger.
- Check Totems**
Totems must be pulled (costs resources) and upgraded with duplicates (to increase power). If you have not built any totems yet, you are leaving multipliers unused. Even one upgraded totem is worth the early investment. Also check if you use the right totem (use Attack / Damage totem first)

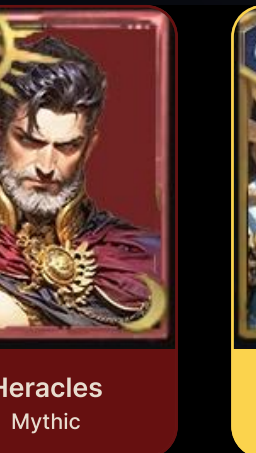

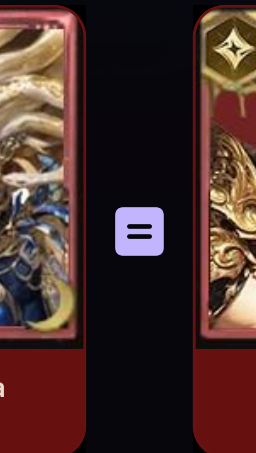

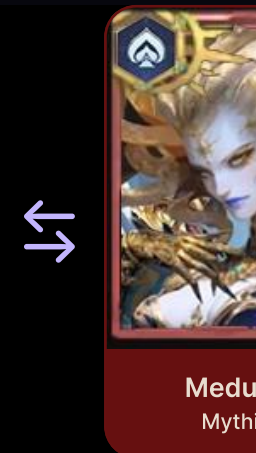

Extra-Hint: Sometimes in a fight use different hero positions in order to maybe win the fight. Move heroes around, look who is being attack first or what hero do you have to attack first. Don't just stay in one formation all the time.

Diety Swap Event

The Deity Swap Event lets you transfer all investment from one hero - stats, awakening, everything - onto a different hero. It is one of the biggest safety nets for early mistakes.

DO NOT RUSH IT

Wait until you have enough game knowledge to know which hero you want to swap into. Swapping into another bad pick wastes the event entirely.

- Good swap out:** wrong early carry, duplicate role, old investment you no longer use.
- Good swap in:** Hecate, Fengyi, Caishen, Yue Lao, Demeter, or any other carry your account is built around now.

Odyssey & Teams

Basic Rules of the game for good progress

1-2 CARRIES

They deal the damage. Get the gear, the relics and invest in them first.

3-4 SUPPORTS

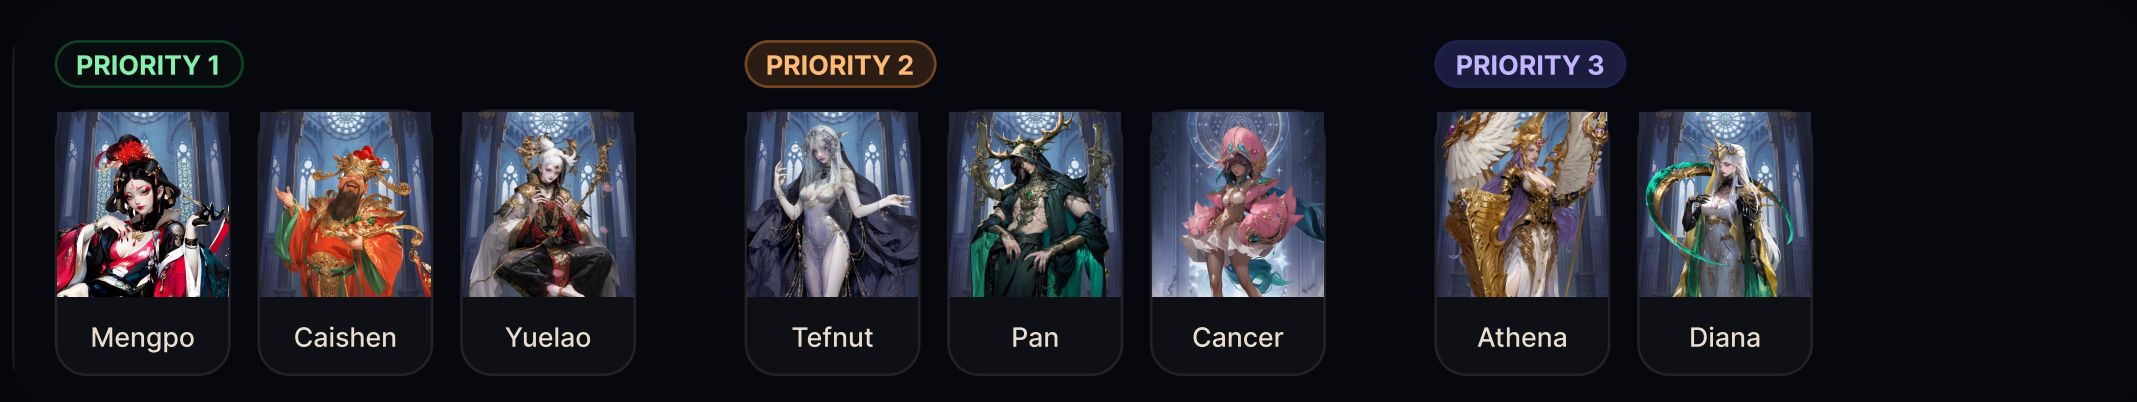

Get energy, buffs and uptime for your main damage dealers. They enable and need protection.

Example: If Isis is your carry, you need supports to give her energy, healing and buffs to deal faster damage and use her ultimate than the enemy team does. Others just help to let her ultimate hit harder, faster and more often. Keep in mind that the order or which hero to evolve depends on your luck what hero you have summoned more than others.

Damage Dealers to build

Support Heroes to build

But wait - what about Dionysus? You have 2 options:

DIANA - BEGINNER FRIENDLY

Restores energy to allies, which means your carry uses their ultimate more often. Simple, consistent, and effective in any team.

Good as your first energy support pick.

DIONYSUS - ADVANCED

Increases attack speed, boosting damage indirectly. More powerful in optimized teams where the carry already has energy covered.

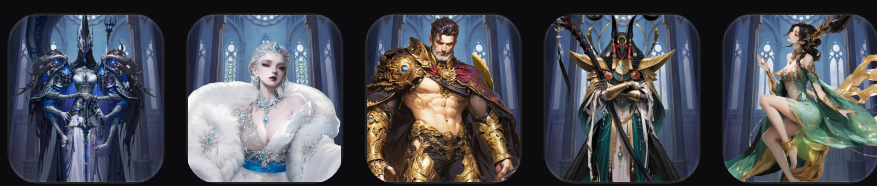

Better once your team has a strong rotation established.

What each slot is supposed to do

Here are examples for the early game and what diety (in early/mid game) belongs to the role.

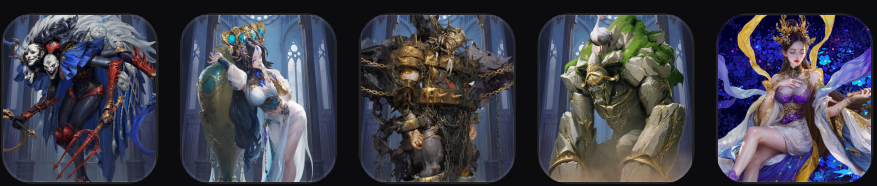

CARRY / DPS

- Hecate** - Sustained 10s damage channel with highest total multipliers
- Skadi** - AoE mage with density-scaling burst
- Heracles** - True damage burst with pull-and-group mechanic
- Anubis** - execute carry with built-in self-heal
- Fengyi** - Good AOE dps

TANK

- Momus** - shield spam + taunt, directly enables Hecate
- Aquarius** - team shield + knockdown,
- Prometheus** - strong at relic 1 unlock
- Geb** - passive proximity damage reduction
- Nuwa** (Starglint - premium pick) - all core functions active at 1 copy

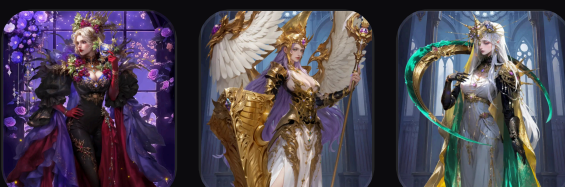

ENERGY SUPPORT

- Caishen** - instant 100 energy + sustained regen to nearby allies, best-in-slot battery
- Diana** - Grants 15 Energy per second

TEMPO SUPPORT

- Dionysus** (Starglint) - Frenzy gives 50% ATK speed + 50% move speed to all allies, the strongest tempo tool in the game
- Athena** - 40-60% ATK speed to all allies, straightforward multiplier on any comp
- Diana** - Waxing Blessing fires at combat start, immediately sets rotation pace with 40% ATK speed

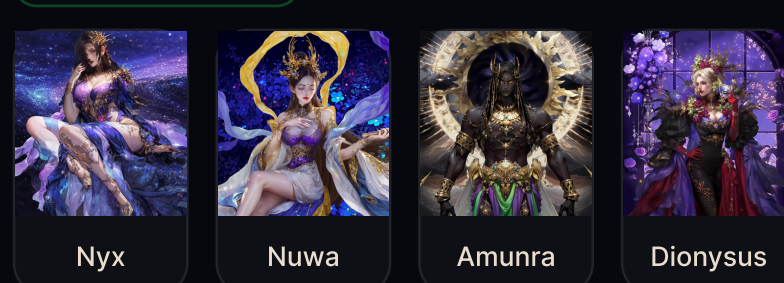

Starglint & Mindsea

Starglint faction has the most rare heroes. They can only be obtained through their special currency "Star Tracer", regular summons (0.2% drop chance) or in the Mindsea shop.

Join a Mindsea as early as possible. After completing 3-9 you can join a Mindsea. Open the list and search for an open Mindsea with a high activity rate. After doing so, collect "Dream Conch" rewards within the Mindsea Currents of Thought. Then you can already buy a Starglint diety within the Mindsea shop.

GET ONE OF THEM

BUILD LATER - NEED HEAVY INVEST
