Dark or Mysterious Lady - Goddess of Strategy

CLUBS

ARCHER

LEGENDARY

QUICK OVERVIEW

Portrait of XuanNv

ROLE

Dual-Stance Physical Carry

BEST IN

Boss fights, Clubs Tower, longer fights

NEEDS

ATK Invest, Relic 30+, deliberate Positioning

AVOID

Heavy CC / silence, high Armor dietsies

QUICK VERDICT

A two-state carry built around a single idea: play Black stance to grind a target down, play White stance to execute the weakest one. The game automatically chooses your stance based on your unit count: if your team has more units alive, she remains in Black stance, ideal for bosses and pushing content. Her damage doesn't come from basic attacks; it comes from Relic riders attached to every attack.

The Mysterious Lady of the Ninth Heaven

Jiutian Xuannv - the Dark or Mysterious Lady of the Ninth Heaven - is a Taoist warrior goddess of strategy and martial arts. In myth, she descends to teach the Yellow Emperor the art of war, handing him the tactics that finally defeat the war god Chiyiou.

She is the goddess who both takes life and gives life: classically shown with a sword in one hand and a healing gourd in the other, a woman's head on a serpent's body. That duality is her whole kit - the Black and White stones of a Go board, one stance to grind a foe down, one to mend and outplay - strategy made into a fighting style.

SKILLS

Outplay the Heavens

Skill 1 - Ultimate

Passive: Xuannv's Normal Attacks have two stances, starting the battle in the White Stance. Black Stance: attacks the default target for 100% DMG and gains +20% ATK per attack, max 3 stacks. White Stance: attacks the weakest enemy for 100% DMG. Active: reads the board and picks the next move - if allies are equal to or outnumber enemies she enters the Black Stance, otherwise she enters the White Stance. Either way she gains +100% ATK SPD for 8s.

Lv2

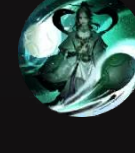

On activation, also deals 500% ATK to all enemies.

Lv3

While in the Black Stance, gains 160% ATK SPD.

Lv4

While in the White Stance, gains +50% Normal Attack DMG.

Clumsy Move Controls

Skill 2

Fires 3 stones at the nearest enemies (if there are fewer targets than stones, the same target is hit again), each dealing 100% DMG. Per hit, compares Energy: if the target has less Energy than Xuannv, she restores 50 Energy; if the target has equal or more Energy, the target loses 50 Energy.

Lv2

Energy restored to self increased to 70.

Lv3

Energy drained from the target increased to 70.

Lv4

Energy drained from the target increased to 100.

Switch & Strike

Skill 3

At combat start, the frontmost ally is designated the White Stone and the backmost ally the Black Stone. The White Stone converts to a Black Stone once it reaches the enemy backline; the Black Stone converts to a White Stone when an enemy comes within 3m. Each unit converts only once. Black Stone: deals 30% more DMG. White Stone: takes 30% less DMG.

Lv2

Black Stone now deals 40% more DMG.

Lv3

On any conversion, that unit gains a shield equal to 500% ATK.

Lv4

White Stone now takes 40% less DMG.

Step Into the Game

Skill 4

When attacked, Xuannv summons a Taiji Formation for 3s, reducing all incoming DMG by 50% and banking the reduced amount. When it expires she fires a Taiji projectile at the nearest enemy dealing the banked DMG. CD: 30s.

Lv2

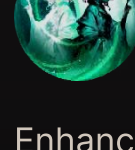

CD reduced to 25 seconds.

Lv3

CD reduced to 20 seconds.

Lv4

Returns 80% of the damage to the nearest enemy.

Celestial Covenant

Relic

Level 30

Enhances both stances. Black Stance: every attack deals extra DMG equal to 200% ATK + 6% of the target's max HP (capped at 500% ATK). White Stance: the first 3 Normal Attacks after entering the stance deal extra DMG equal to 200% ATK + 30% of the target's lost HP (capped at 500% ATK).

Lv2

[Step Into the Game] When on CD and Xuannv is hit, 50% chance to re-trigger it (30s internal CD).

Lv3

[Step Into the Game] Re-trigger chance raised to 100%.

Lv4

Black extra DMG becomes 300% ATK + 10% max HP (cap 800% ATK); White becomes 400% ATK + 60% lost HP (cap 1000% ATK).

STRENGTH & WEAKNESSES

STRENGTHS

+ Stance switching adapts to the board automatically: Black ramps ATK for sustained single-target effects; White pivots to the weakest enemy for cleanup.

+ Void Faint Relic is the real damage engine: per-hit %ATK + %target-HP riders push her far above her base ATK, especially against high-HP bosses where the cap is always hit.

+ White Stance pairs %lost-HP damage with weakest-target selection for genuine execute pressure

+ Step Into the Game turns incoming hits into a delayed reflect, and the Relic adds a second charge, so it procs noticeably more often when she is being focused.

+ Clumsy Move Controls drains up to 100 Energy from higher-energy enemies while refunding her own - real ultimate denial on top of damage.

+ Switch & Strike supports the team: front ally gets damage reduction, back ally gets bonus damage, plus a 500% ATK shield on conversion.

WEAKNESSES

- Stance is chosen by unit count, not by you - in a losing fight, she locks into White even when the Black ramp would deal more.

- Black ramp (max 3 stacks, +60% ATK) needs time on one target; she is weak in the opening seconds before stacks, and Relic riders build

- Switch & Strike is positioning-dependent - the front/back designations need an intentional team and cannot be blind-slotted

- Step Into the Game can be skipped by a single hard one-shot before the 3s formation resolves.

- Her entire kit is Physical, so enemy Armor and physical damage reduction hit everything she does - no magic or true component to bypass it.

- Drain and reflect value scale with fight length; in very short fights, she underdelivers versus pure burst carries

DEITIES THAT WILL HELP HER

Hephaestus

ATK Spd, Buff, Energy Restore, Enemy CC, Enemy Armor Red

SHUT DOWN BY

Sekhmet

You Challenge Me? locks Xuannv into a duel, disabling White Stance target selection and making Switch & Strike positioning irrelevant. Sekhmet ramps faster via Roaring Fury (+100% ATK at 20 stacks plus % max HP damage) and wins the isolated 1v1 cleanly.

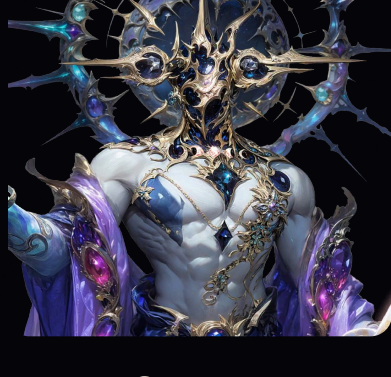

Yanluo

Wheel of Karma drains 50 energy from Xuannv per hit on Yanluo, up to -200 energy per 10s, collapsing her ultimate frequency and energy-gap advantage from Clumsy Move Controls. Yanluo's Seal then chains her for 8s, the longest CC window in this list, during which Black Stance accumulates nothing.

Wen-Shen

Star of Ill Omen disables Xuannv for 4s, halting basic attacks and resetting all Black Stance momentum. If Wenshen dies while Xuannv is jinxed, every subsequent attack has a 50% chance to apply stun, terror, or petrify, making sustained ramp impossible for the rest of the fight.

Cronus

Temporal Vortex strips -100% ATK SPD from all enemies for 5s, instantly wiping her Black Stance ramp mid-fight. Rewinding Remains revives dying targets just before death, directly canceling White Stance execute pressure. Temporal Rift repositions and stuns for 2s, swapping front/back Stone assignments and breaking her attack chain.

Nuba

Curse of Decay permanently stacks -15% ATK SPD per ultimate (up to -60%), gutting the Black Stance that relies on 160% ATK SPD. Crimson Doom Mark reduces her damage output by 25% while active, and the % current HP damage component bypasses her all-Physical limitation entirely.

GEAR & STATS

Stack Attack, then Crit

Every rider in her kit is a multiple of ATK, and they all crit. The %HP riders are capped by ATK, so increasing ATK raises the cap as well.

ATK %

>

Crit DMG

>

Crit %

>

Attack Speed

>

Energy / Haste

>

HP% / Armor

Attack Speed is unusually good on her: every attack carries a full Relic rider, so more attacks per second is a direct damage multiplier, and her ultimate already hands out +100% ATK SPD. Defensive stats are mostly covered by Step Into the Game and the Switch & Strike shield - lean offensive. Remember her damage is all Physical, so enemy Armor is the stat that hurts her most.

VIRTUES

Oblivion

Legendary

2-Piece

Armor +30%, M-RES +30% at start

4-Piece

CC immunity for 8s at combat start

Eight seconds covers her entire first cycle (~2.5s bank + 5s charge)-it deletes her only true kill window. Mandatory in PVP.

Fervor

Legendary

2-Piece

Energy Regen +10%

4-Piece

On Ultimate use, +10% ATK (max 4 stacks = +40% ATK)

Amplifies her 200/s engine and snowballs across cycles - the long fight and boss timer pick.

Insight

Epic

2-Piece

CRIT Rate +10%

4-Piece

+30% CRIT Rate before first dealing damage

She deals no damage while channeling, so the bonus may carry into her first Starfall.

A carry with a twist

Xuannv is a thinking player's enemy. The duality core to her play is defined by her two stances: Black and White. Black stance is active when allies outnumber enemies and excels at sustained damage (grind), while White stance occurs when enemies outnumber allies and enables high burst (execute). The headline for her kit is this stance-switching, but her main damage engine is the Relic: her base 100% hits are filler, and the real damage comes from her per-hit %ATK + %HP modifiers, which peak against bosses where these conditions are always met. If White's three empowered hits reset on every entry (untested—the CN text only hints at this), then chaining stance flips becomes her highest DPS route. There are drawbacks: you do not directly choose her stance—it's determined strictly by the number of units on each side, her kit deals only Physical damage, so high Armor counters her, and her Switch & Strike move requires careful positioning to pay off. Build her offense, place her in the backline, and always bring Armor Shred. She is a monster in PVE, especially for Clubs Tower and pushing content; in PVP, she is more dependent on the matchup.

* TIER DEFINITIONS

S Meta-defining. Warps team-building and counter-picks around her presence.

A Strong & reliable. Competitive in most contexts, clear strengths, manageable weaknesses.

B Situational. Excellent in specific niches, outperformed elsewhere.

C Serviceable. Useful early or in narrow comps, outclassed at high investment.
